A prerequisite for infants to build a lexicon for word learning is the ability to segment words out of the speech stream. (Jusczyk and Aslin, 1995).

CDS vs ADS

◆□▶ ◆□▶ ◆ □▶ ◆ □▶ ● □ ● ● ● ●

CDS advantages

 Behavioral studies suggest that infants segments words more easily in CDS (child directed speech) than ADS (adult-directed speech) (Thiessen et al., 2005).

What is Ko corpus?

- Ko corpus containing 35 mothers freely interacting with their own children for about 40 minutes(Ko et al., 2020).
- The same corpus also contains ADS in which the mother talks to their family members and experimenters for about 10 minutes(Ko et al., 2020).

Conclusion

▲□▶▲□▶▲□▶▲□▶ = ● のへで

Conclusion

- The properties of ADS and CDS are different from each other.
- CDS seems to have advantages over ADS in segmentation.

(日)

E

 The different properties of the registers affect the performance of word segmentation.
