# Welcome to EuroVis 2017!

EuroVis 2017, the 19th Eurographics / IEEE VGTC Conference on Visualization, will take place in Barcelona, on June 12-16, 2017, hosted by the Visualization, Virtual Reality and Graphics Interaction Group (ViRVIG) of the Universitat Politècnica de Catalunya. EuroVis is the annual Visualization Conference organized by the Eurographics Working Group on Data Visualization and supported by the IEEE Visualization and Graphics Technical Committee (IEEE VGTC). It has been an Eurographics and IEEE co-supported international visualization event held in Europe annually since 1999.

On behalf of the Organizing Committee, we welcome all the attendees, and hope that you will enjoy this event that we have prepared with great enthusiasm and will also be able to experience several of the many activities Barcelona has to offer.

# Co-Located Events

Several co-located events are traditionally organized along with the EuroVis conference. This year there will be 4 conferences and workshops, and one tutorial. These events take place on Monday afternoon and Tuesday morning. The events are the following ones:

## EGPGV

EGPGV'17 is the Eurographics Symposium on Parallel Graphics and Visualization. This year, it is its 17th edition. EGPVG aims to foster the exchange of experiences and knowledge exploiting and defining new trends in the area at the crossroads of big data mining, parallel computing, computer graphics, and data visualization.

---

## EnvirVis

The EnvirVis workshop addresses the visualization needs for environmental research. Its goal is to raise awareness to the importance of visualisation in geosciences and to establish a forum for interdisciplinary discussions. Not only that research in environmental sciences has become more and more important as we are faced with increasing problems concerning climate change, water scarcity, pollution of the environment and changes in biodiversity. In addition, the amount of data obtained from complex monitoring, remote sensing, statistical analysis, and simulation of natural phenomena such as groundwater processes or migration of animal species under changing natural conditions is ever increasing.

## EuroRV3

The fifth EuroRVVV (EuroVis Workshop on Reproducibility, Verification, and Validation in Visualization) workshop was co-organized by Kai Lawonn (University of Koblenz - Landau, Germany), Noeska Smit (University of Bergen, Norway), and Douglas Cunningham (BTU Cottbus-Senftenberg, Germany). The call for papers this year focused on the topic of 'Perception in Visualization'. Submitted papers underwent a one-stage peer-review process, and five papers were accepted for presentation. The full program featured a combination of paper presentations and invited talks.

---

## EuroVA

EuroVA 2017 is the eighth international EuroGraphics workshop on Visual Analytics. Visual Analytics is a problem-solving and sense-making technology that integrates analytical computations, visual representations, and interaction. It includes the analysis of complex (massive, dynamic, ambiguous, conflicting, ...) data and information for gaining understanding, building knowledge, and inferring insight. Visual Analytics aims at a synergistic collaboration of humans and computers mediated through interactive visual interfaces.

## Machine Learning Methods in Visualisation for Big Data 2017

In Monday afternoon, Ian Nabney, Jaakko Peltonen and Daniel Archambault are organizing for second time the tutorial on Machine Learning Methods in Visualization. This year, the tutorial will focus on Visualization for Big Data.

## **TITLE:**

Visualization: The secret weapon for machine learning

## **ABSTRACT:**

Machine learning is playing an increasingly influential role in the world, due to dramatic technical leaps in recent years. But these new developments bring their own questions. What is the best way to train models and to debug them? How can we understand what is going on under the hood of deep neural networks? It turns out that visualization can play a central role in answering these questions. We'll discuss recent work that shows how interactive exploration can help people use, interpret, and learn about machine intelligence. This talk will be an invitation, aimed at visualization experts, to the field of machine learning.

### **TITLE:**

From One to Many in Visualization

### **ABSTRACT:**

A lot of interesting development has been happening in visualization research in the past 25 years. Certain topics, like medical visualization, flow visualization, tabular data visualization, and network visualization have attracted continued interest over many years and every year fascinating new findings are presented. We focus on the important work of optimizing our solutions and maturing the field. Every now and then, however, we also see promising chances for radical innovation, for new pioneering research in visualization. In this talk, we take a look at one of these chances, i.e., to transition from the visualization of individual datasets to visually studying large sets of datasets, for example from medical cohort studies or from numerical ensemble simulations. It seems that relevant new visualization challenges arise, when hundreds or thousands of datasets are studied simultaneously—in particular, when these are sets of multi-aspect spatiotemporal datasets. This talk brings up some of the related major questions (for example: how to map to the 2D/3D visualization space), together with examples of related work, and hopefully inspires some bright minds to conduct more visualization research on this topic of increasing relevance.
